

* Program:-

```
filename = input("Enter the file name:")
if (os.path.exists(filename)):
    f = open(filename)
    str1 = f.read()
    Print("Original file contents:", str1)

    f = open(filename, "w")
    f.write(str1.title())

    f = open(filename)
    str1 = f.read()
    f.close()
else:
    Print("Error: Error not found!!!")
```

Output:-

Enter the file name: demofile.txt
original file contents: A quick brown fox
jumps over the lazy dog.

updated-file-contents: A quick brown fox
jumps over the lazy dog.

Enter the file name: abc.txt
Error: file not found().
