* Program :-

```
string = input ("Enter the main string:")
substring = input ("Enter the substring to
                                    search:")
if substring in string:
    Print ("substring is present")
else:
    Print ("substring is not present")
```

Output :-

```
Enter the main string: Hello Python world.
Enter the substring to search: Python
substring is present.
```
